Hello,

   My name is Jeremy Wiles-Young, I am a software engineer and artist based in Brooklyn, NY and I am applying for the Junior Software Engineer - Data position. I feel my unique experiences make me an excellent candidate for this position. I have eight years of professional software engineering experience working for the synthesizer company Critter&Guitari, where I worked extensively with embedded systems (Raspberry Pi and Arduino), and software like Max/Msp, PureData, and openFrameworks. Currently I am a full stack web developer with a year of professional experience.

   My technical experience covers a wide range of digital tools and hardware including but not limited to: embedded systems, web development, digital signal processing, digital video and animation, 3D animation, and networking. For web development I have professional experience with modern web tools such as React.js, Node.js, Drupal, D3.js, Three.js, Webflow, MongoDB, Django. I have extensive experience with a variety of languages and developer tools including, Git, Github, Python, C++.

   I am dedicated to open access in technology and strive to make everyone I interact feel empowered to use and understand these tools. I can clearly communicate with collaborators and clients and really enjoy working on collaborative, challenging projects. My passion for technology comes from using these tools in my art and music practice, as well as in my professional work, so I'm always learning and sharing.

Thank you for taking the time to consider my application and feel free to contact me by the means I provided above.

Sincerely,
Jeremy Wiles-Young
